Experience

Web Developer
WorldCraft Logistics

Rancho Cucamonga, CA
Jul 2019 - Oct 2019

I connected the database to the employee webpage using PHP, phpMyAdmin, and SQL allowing employees in the office and warehouse to make necessary changes to incoming and outgoing shipments.

I implemented server-side processing to employee webpages using the DataTables plugin to decrease webpage load times from 4-5 seconds to half a second.

AFriend
Design Project

San Diego, CA
Sep 2019 - Dec 2019

The project was to design a social computing application that allows users to interact synchronously in a co-located space.

I conducted surveys and interviews to find user needs to then create wireframes and user flows that can be transitioned into high fidelity prototypes.

I coded a rough skeleton of the prototype using HTML and CSS that piggybacks off of Discord to show users what the application would be like.

Mint Redesign
Design Project

San Diego, CA
Sep 2019 - Dec 2019

The project was to research and design a new budgeting feature for the mint app.

I focused on user research (surveys and in-person interviews) and prototyping.

I created and tested paper prototypes to finalize our new feature and present our high fidelity prototypes.

Education

University of California, San Diego
Bachelor of Science in Cognitive Science - HCI

San Diego, CA
September 2015 - December 2019

Skills

Adobe XD	Figma	HTML	PHP
Atomic	Invision	CSS	Java
Axure RP	Sketch	JavaScript	C/C++
Framer	Photoshop	MySQL
